## Installing Cisco AnyConnect VPN Client

## In a web browser, visit https://vpn.southwales.ac.uk

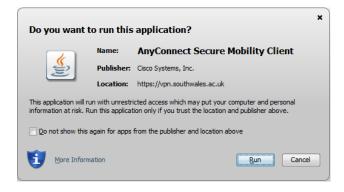

Login with your **UNI** username and password.

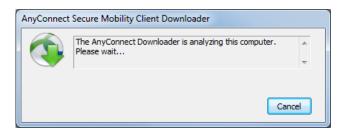

The OS type is checked and an attempt will be made to install the VPN client onto the computer. This requires Java and so several Java related pop-ups may be seen.

Note: In many cases, dependent on the browser configuration, these processes may fail. If so, the auto installation will fail and offer you to download the client.

You should see the automated attempt to install the client.

Click Run

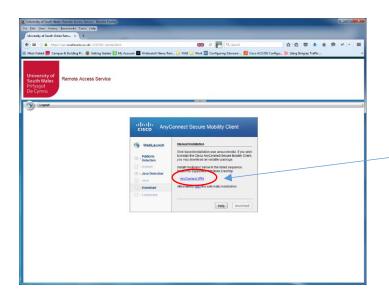

AnyConnect Secure Mobility Client Downloader

Failed to install AnyConnect Secure Mobility Client 4.2.01035 with installer error: Fatal error during installation. A VPN connection cannot be established.

As can be seen in this example, the installer failed.

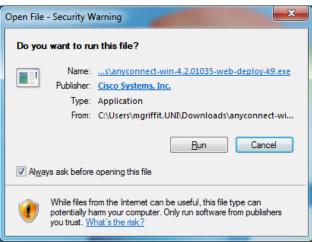

The next step will allow the download of the client and subsequent manual installation.

To download the client and install it manually click **AnyConnect VPN** 

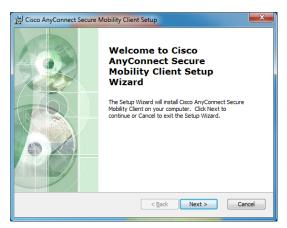

Save the file to a suitable destination.

**NOTE:** The installer requires Administrator privileges to install the client successfully.

To run with administrator privileges, right-click on the installer file and select the "Run as administrator" option.
